

Multimodal data integration study

 Not concerned
 To do
 In progress
 Done

General protocol

Human Ressources

Ethician/Jurist				
Biostatistician/Bioinformatician				
Clinical/Biological experts				
Project manager				
Data steward				

Computer Ressources

HPC				
GPU/CPU				
Long term storage				
Short term storage				
Energy footprint				

Good practices

FAIRE principles				
CAIRE principles				
Consent and etgical approval				
Benchmark				
Licences				

Integration protocol

(Precise) Research question

Define clear research question				
Specify outcomes				
Specify success criteria				
Formulate explicit objectives				
(Interpretability requirement defined)				

(Manage) Data

Create Data Management Plan (DMP)				
Reuse data				
Collect new data				
Accessibility and authorizations to access data				
Define required modalities				
Define preprocessing steps for each modality				
Explore each modality				
Create and manage metadata				
Characterise links between modalities				
Use of prior knowledge				
(Regulatory compliance)				

(Select) Algorithm

Match algorithm task and research question				
Adapt to data characteristics				
Decide when to integrate modalities				
Evaluations				
Version control				
Reproducibility				
Code availability				
Data leakage				
Unimodal baseline				
Preregistration
